## H-fusion

Smart | Simple | Basic

The H-fusion series is inspired from the 1960s to 80s designs. It shapes the two seemingly opposite styles of classic yet modern into one eyeglass.

HFL-606

The three types of the H-fusion LIGHT series are constructed of Sun Platinum metal<sup>(\*)</sup> which was developed in Japan at the beginning of the Showa period. The round type (HFL-605), the slightly bigger Boston type (HFL-606), and the small Boston type (HFL-607) can be finished with a technique called "cell-wrap<sup>(\*\*)</sup>" or by leaving the Sun Platinum metal visible. Either way, the eyeglasses are fashionable and classical for all to wear.

(\*) Sun Platinum metal is used for medical appliances. It has a beautiful soft glow and is safe to the skin. The Sun Platinum metal used in the eyeglasses are not coated with any metal or other material.  
(\*\*) The cell wrap technique wraps a black or light/dark demi colored plastic around the rim. This finish strengthens the classical feeling of the eyeglass.
